

Windows Server Security

Student Name: Worlanyo Akpatsa
Student ID: 101590287

Term: Winter 2025

Case Project

Scenario

Contoso Pharmaceuticals is a medical research company with about 5,000 employees worldwide. They have specific needs for ensuring that medical records and data remain private. The company has a headquarters location and multiple worldwide sites. Contoso has recently deployed a Windows Server and Windows client infrastructure. You have been asked to Complete tasks below

Objectives

- 1) Install a domain called yourname.local on Server core
- 2) Configure Group Policy and enforce password change to 30 days
- 3) Install DHCP server,
 - a) Create 4 scopes named yourname-TorontoLab, Yourname-TorontoOffice, Yourname-MontrealLab, yourname-montrealOffice (use any Ip range you like)
 - b) Create 1 Superscope for Montreal (yourname-Superscope)
 - c) Create 1 Multicast scope (yourname Multicast scope)
 - d) Create a reservation
 - e) Configure options
- 4) On your domain DNS Server, create forwarder and forward all requests to 8.8.8.8
- 5) Create a storage pool and a virtual disk
- 6) Create an iSCSI disk on server 2 and attach it to Server 3
- 7) Install Hyper-V Role on server 2 and create a virtual machine
- 8) Install Hyper-V role on server 3 and configure Hyper-V Replica
- 9) Install and Configure WDS
 - a) Enforce WDS settings to clients using group policy and remove pause option.

~~~~~

## B: Promoting CLCT4003-1DC to a DC

The screenshot shows a VMware Fusion interface with a single virtual machine named "CLCT4003-1DC". The window title is "CLCT4003-1DC". Inside, a PowerShell window is open with the following command:

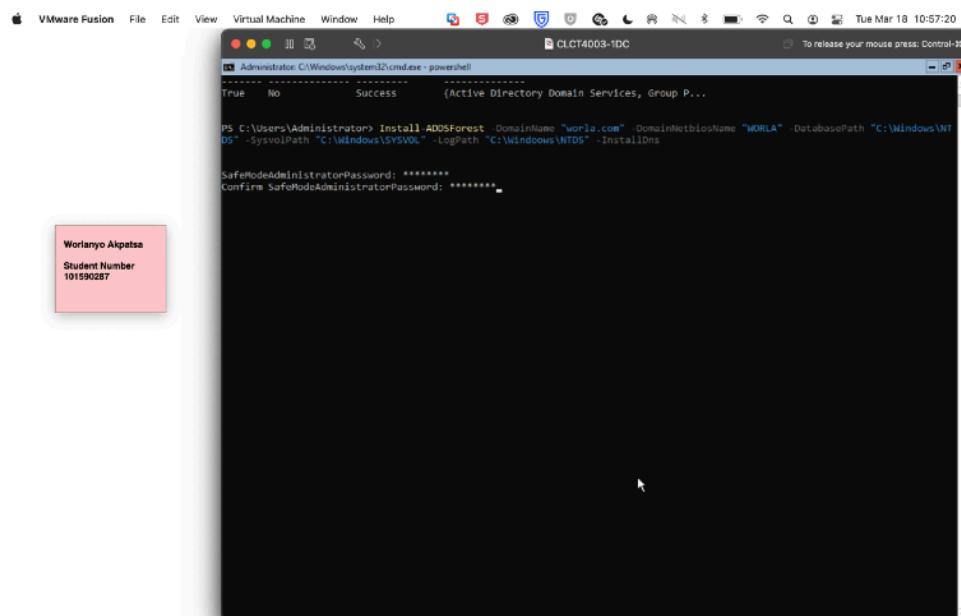

```
PS C:\Users\Administrator> Install-ADDSForest -DomainName "worla.com" -DomainNetbiosName "WORLA" -DatabasePath "C:\Windows\NTDS" -SysvolPath "C:\Windows\SYSVOL" -LogPath "C:\Windows\NTDS" -InstallDNS
```

A small red box highlights the text "Worlanyo Akpatsa" and "Student Number 101590287" in the bottom-left corner of the screen.

# Windows Server Security
